Luxury Pods Ltd
15 Invicta Way
Manston Park
Ramsgate, Kent
CT12 5FD
United Kingdom

For the do-it-yourself enthusiast who wants to save money and build their own bespoke Sauna - we offer the option to buy the Sauna structural aluminium frame. Colour coded parts and diagrams help construct the strong framework using only one tool! Free seminars are available to find out more about the LOCX System and how to erect your own pod frame. The aluminium profiles and connectors are lightweight, flat packed, easily transported and fit into a small van or SUV. If you need to move it, the frame is easy to dismantle, transport, store and re-assemble.

Luxury Spa Rooms - Outdoor and Indoor Saunas

LUXURY SAUNAS

No matter what type of heat you desire, electric stone furnace, electric infrared heater or wood burner, we can adapt our HexaPod® Sauna using Finland's finest range of Harvia heaters. Our bespoke Saunas allow you to choose from a wide range of materials and colours for outdoor or indoor use.

UNIQUE HEXAGON DESIGN

Our six-sided Sauna has been reverse engineered using 1.22 x 2.44m (4ft x 8ft) sheet materials to create minimal waste and is 2.1m in diameter and 2.5m high. The base is raised 12cm off the ground and sits on 15 'feet'. The Sauna can be placed on decking or paving and does not require a permanent foundation, saving time and money. The two tiered seating can accommodate 5 people comfortably. The bottom seating is 2m long and 1 m wide allowing you to stretch-out and relax. The 'floating' upper seat is for those who prefer more extreme heat.

ENERGY EFFICIENT - DOUBLE INSULATION

Good insulation is key for an energy efficient sauna to quickly reach and maintain the desired temperature. To minimise heat loss and achieve high temperatures we have double insulated the walls, floor and ceiling. Beneath the exterior cladding is 50mm foil coated high performance insulation and an additional structural thermal board that is water and fire resistant for the porcelain tiles to fix onto.

100% WOOD-FREE STRUCTURE

Except for the specialist Obeche timber on the seating, the entire Sauna is wood-free. Our primary goal is to dramatically improve the lifespan and strength of Saunas by using aluminium which is largely maintenance-free and provides excellent value for money over its 60+ year lifespan. Unlike timber Saunas, the aluminium structural frame is not affected by excessive heat, temperature fluctuations, moisture, mould or wood-rot over time.

Obeche is a premium, knot free wood that is resistant to warping in hot humid environments. Obeche's low thermal capacity means that the surface of the seating does not exceed 40°C when the Sauna is 90-110°C and quickly adjusts to the body's temperature.

VENTILATION AND DRAINAGE

In the centre of the floor is a built-in pop-up drainage plug, this can be used for ventilation or used to remove excess water when cleaning the Sauna.

LIGHTING - A CALM AND RELAXING SPACE

Our waterproof, heat resistant, dimmable, LED lighting, creates a calming and inviting atmosphere in which to relax and enjoy your Sauna. Create your own ambiance with a choice of 16 million colours using the app or the remote control.

REDEFINING SAUNAS

"Our mission is to create exciting, sustainable structures that break away from tradition and explores innovative designs and materials that elevate modern living and redefines the concept of luxury in our gardens."

BRITISH DESIGNED AND MANUFACTURED

Over the past two years we've been developing a completely new, sustainable way to build long lasting, strong metal structural frames using recycled British Aluminium. To date we've uploaded more than 900 images to the Patent Office to protect our connectors and aluminium profiles, called the LOCX® System.

EXTERIOR CLADDING

For a contemporary exterior look we offer a range of glass mirrors, ribbed cladding or Aluminium Composite Panels (ACP), the same cladding that Architects use on modern high-rise buildings.

VINYL WRAP - A NEW DIMENSION

If you want to blend into your surroundings or create a bespoke look, we've introduced the option to vinyl wrap the ACP panels with high-definition photographic images. The artwork is then protected with a matt UV-resistant laminate. Lamination protects digital print against moisture, abrasion, UV light and makes it at least ten times more durable.

ARRANGE FOR A ZOOM CALL WHERE WE CAN DISCUSS YOUR PROJECT.
